Hi all,

I have managed to get hold of a 4-switch that works with my 250-4 amp, but the markings on the footswitch is wrong since it's for another amp...
...and when I fix that, why not use the correct terms...

The problem is I don't know what it says on the original 4-switch.
It wasn't possible to read out of the pictures in the litterature section either.

Could someone tell me what the markings are?

BR,
/Peter
