Hello. I recently bought a 1972 Kustom K250 bass amp. The polarity button functions correctly, but the actual Power button for the amplifier is completely missing, and the only way to turn the amp on is through a power strip. I've found a replacement for the push-button power switch - but I am looking for the blue lens/button that you push. If anyone has one lying around - please let me know. Thank you.

Kyle

I don't want to 'highjack' your post so please forgive. I'll mention that I too am looking for power and polarity switches. My blue buttons are fine just the switches don't work. So if anyone out there can assist please help KustomKyle first.

If you have the switches still in the amp you can easily fix them.

PM me your email address so I can send you photos on how to do that.

Do your switches still have the round white part that the blue lens's pop onto?
