My amp came without a tank it's a hustler 24-l the metal face. I could not find any previous holes in the speaker where it was previously mounted, can anyone tell me where it originally went ?

thanks  
ns

If I recall correctly, it was inside a Naugahyde bag that layed in the bottom of the inside of the amp and the RCA cables ran from out of the bag to the head.

the bag thats what i forgot, its a bit sensitive screwed in with soft rubber gromits for suspension, but good bottom is my choice thanks
