Great site guys! I'm a new member and I've done an appropriate amount of due diligence in searching the existing threads for an answer to my question, and alas could not find what I was looking for. I have a K 300-5 PA that I use for vocals in my bands practice room. I've had the PA for many years and have used a pair of Fender LTB-10 speakers (8ohm, program 120W). I'm looking for suggestions or examples of what mfg. and type of speaker would be well suited to match with my PA. I would also like to find an appropriate way to use the monitor output for stage monitors. Please note that all this "ohm", "rms", "watt", verbage is close to a foreign language to me. I'm reading up on it, but I'm far from an expert. Thanks for any help or suggestions that you guys can give me.
