---

These were my dad's. He was a pro guitarist and played out with them for many years.

Amp head model K250-4, S/N 105187  
I think that means it was made in '73.

Cabinet models:  
X2G+1H S/N S-40860  
2G+1H S/N S-47426  
Cabs stand about 4' tall and 2' wide.

I have the original foot switches (one with reverb and tremolo, one with fuzz and boost) and the boost pedal, P/N 071-0009-00.

They are in perfect working order. I shelled out a good bit having the amp head and cabs rebuilt in the early 2000s (the work was done by Inner Sound in Portland, OR). I've only used them a few times since.

The front of the cabs and amp head look great. The vinyl (I believe the naugahyde color is "Cascade") is in fair condition, mostly. There is a small blemish on the top of the amp head, and the cabs have some indentations in the vinyl on the top because stuff sat on top of them. The biggest blemish is the back of one of the cabs, where a large section of vinyl was torn away by one of my dad's band mates borrowing his stuff and not being careful enough with them.

I am now a mom and have come to terms with the fact that I will never need these. It's time to find them a good home where they will be loved and cherished.

I'm trying to figure out what they are worth, so any advice I can get from you guys would be of help.
