Hi,

I just drove my "new" K250-4 amp and 2x15 cabinet home today and I'm thrilled with the sound and everything, but there were no pedals...

- Are there any replacement pedals out there that are more or less 'plug-and-play' or...
- Does anyone here have specifications on the pedals for trem, vibrato, reverb, fuzz and Wah-wah for the K250-4.

I guess I will start taking this thing apart anytime soon, but especially the wah-wah pedal feels bad to trial-and-error my way forward, particularly so as I guess the 'error' in trial-and-error probably would happen inside the amp...

Great to be another Kustom owner and fan, and great to find this place for information and other Kustomees..

BR from Sweden
