Does anyone have any input as to who I can contact in the Portland Oregon area to get my amp fixed?

I have a K 100C-8

The right hand side is blown. Rather I plug in either the top or botton plug on the right side, I get nothing. The left side work in both plugs, but, it's noisy.

Blaze Wilke, former road tech to the stars, was working out of Bend the last I heard. It's a bit of a drive, but he's REALLY good.

Yes, I'm thinking we are on the same page here. If I'm standing in front of the amp, it's the channel on the right side.
