I need a fuseholder for a TRT100 amp. Anyone have any idea where i can get one? The fuse is a T4A250V. I'm trying to get this amp up and running quick. Please help.

Do you need the whole fuse holder, or just the cap that holds the fuse and loads into the rest of the holder. The caps are different from one fuse holder manufacturer to another, so I would email Kustom as they may be able to help you out, If not email me as I have a TRT100 also and as I do repairs and have different styles of holders on hand I can try different caps that I have and tell you what to order from a supply like Mouser electronics or Newark .
You may find that a holder from radio shack will have a cap that will work.
