I need a power transformer for a k150-2. I have a transformer for a k100, will sell or trade, unless I can use it for the 150. Does anyone know if that is possible?

The voltages for the K150-2 is 39.5 volts. The K100-1&2 voltages are 39.5 and the SC K100 are also 39.5 volts.

Thanks Pleat, If I understand you they are all 39.5 volts and should be interchangeable. The transformer I bought was said to come from a vintage 100, I compared the two and the 150's magnet seems to be a little wider. Here are the numbers on the transformer I bought ...019-7002-01 and below it 1005824. I would like to put it in the completely dead 150 I just bought. Does it mean my 150 on the outside will now be a 100 on the inside assuming the transformer I bought is in fact a 100. Thank you in advance for your guidance.

It should still be a 150 because of the pre amp board and power section. As long as you are feeding it the proper voltage, it will be a 150.
