late 1968 K100-1 HEAD ONLY, NO CABINET.

Great working head with original knobs and power cord.

Head is all original but for these items.

Installed heat sinks on driver transistors.

Replaced broken .0047 cap across normal channel input jacks.

Installed non solder in type fuse holder on top of factory fuse holder.

Unit has a cracked plexiglass face plate that I glued. The crack runs from the 9 o'clock position on the brite channels volume control to the left side of the plexi panel, this repair left the crack looking like a scratch and not a crack.

I serviced the unit by cleaning and lubing all the pot's and doing the same to the 4 switches in each input jack.

Unit runs nice and quite and outputs its rated clean wattage.

Nice unit to use for gigging where you would leave a primo amp home.

For pictures please email me or call.
