Just got my first K100 -2 and the map is missing. I read in a few places to use a -28v lamp, NOT a 6.3v so I figured best check with experts here..

Also can I date my Cat from the serial number ?

Thanks!

The bulb is #1829 and you can do a search on this site for a serial number chart that will date your amp within a few months.

Post the serial number and I'm sure someone will give you an answer. If you use the Forum search tab, try serial number, and see what pops up.

What I ment was to type the words: Serial Number Chart in the formun search.

Your amp 43316 was built between July - Sept. 1969 according the the chart on this site.
