Can anyone (Kustom Dan?) tell me how I can post an image? I drew a schematic of a portion of my K100-2 (early version w/o Q131) that had a reverb problem. I traced out the part of the schematic between Q107 and Q108 (w/o Q131) and would like to post it along with the fix I did for reference and to show the schematic for that part of the amp itself.

I've posted images here before by uploading them to an image hosting site (Photobucket, in my case), then copying and pasting a link provided by that site into a Vintage Kustom post form. Photobucket gives a few different options for linking; if I recall correctly, I used the IMG one.

Thanks Zedsalt, I'll give that a try as soon as I get a chance. (Not sure why my original post wound up under the For Sale Forum??? Must have been operator (me) error.
