Does anyone know what ohm load you end up with if you install 2 JBL D-140's rated at 16 Ohm each with 1 JBL D-140 rated at 8 ohm if all wired in parallel ?? We are rejuvenating an old Kustom JBL three tower bass cabinet and K200 bass amp top.  
JB

The impedance would be 4 ohms, but the power will not divide evenly between the three speakers. The 8 ohm would get 1/2 of the amps power and each 16 ohm would get 1/4.
