playing condition and very good cosmetic condition. From left to right it has high and low inputs, volume, treble (pull out boost) bass, power light, intensity, speed (in-tremelo, pull out-Vibrato) Reverb, and foot switch. Everything works and this amp puts out a loud 25 watts! This is a super versatile amp that can handle any gig if mic'd. I couldn't figure out how to attach pictures. Go to [reverb.com](#) and search for Kustom SC combo to see pics. It is for sale there with payment options: Paypal and Affirm financing.
