Does any one have a manual and wiring diagram for a Kustom K4160A MOSFET mixer/amp? I just acquired one last night and apparently it has an issue with the reverb. I'd also like to have a copy of the manual that goes with it. Appreciate any help with this I can get.

Does the mixer have a Reverb tank?

Found out that the reverb works okay its just that the first two channels fade in and out and loose all power and then come back again after a few minutes and then fade again; other two channels work just fine.

Does it have plug on connectors for the boards? May need to give them a good cleaning.

Oh ok!
A favor please?
With any more questions about how to fix this please start a new thread in the repair section if you would, thanks much!

Right, I understand that and I wish I could help you out in that regard, but the owners Manuel will not help you in trouble shooting the mixers issue!

Did Kustom not include an owners manual with their equipment when sold? They must have been biodegradable like the lighted footswitch that seems to have all but disappeared as well.

I don't need an original manual, just a photocopy to keep with my amps. Surely someone has a copy? It would be nice if this website had a section on all the manuals if they did ever exist.
