Looking for early seventies T&R two JBL 15's & HF driver cab with or without booster amp which would be the x2L&1H (that's the way it's listed in the add literature of the day.). wo me it's 'two JBL 15's in a tuck 'n roll column box with a high frequency driver on top'. Some of these speakers were coupled with a twin speaker box where one of them had a 250W booster amp that brought the total power output to 500W. . .oh boy!
