for keyboard amplification, this rig would be perfect. I have the #4 power unit (also designated K250-4)

Now I'm looking for this speaker combo to compliment it.

It's kinda rare so if I can even find just the cabinet itself
and then I can find the speakers to put in it. JBL D130f's are pretty
easy to find. What kind of hf horn is in there I've no idea do you?

They had a Altec Lasing horn and if I recall right a Altec 806 driver.

If you can't find the right cabinet you can make one from any 3-15" cab if your willing to take it apart.

For the metal face line of heads you would prefer the right cab that does not taper down towards the top like the early cabs did.

Thanks for the info Steve:

What model horn was used with the 806 driver. I'm looking at 511B and 811B horns but they look kinda long

for the Kustom cabinet. . .did they use a shorter horn?
