Hi everyone. I've been radio silent on here for years, as I've been working mostly on 200's, and I've got that figured out. Now, I get a 250, and there's things to be done.

The power lamps within the buttons are so small! Can I get a part number on how to find them?

Lamps are 335's 28volt Careful with the switches / they break waybto easy due to age. If you destroy one by accident SteveM has a solution but runs about $70 a switch. Have a great day.

Let me know if you still need the bulbs. I found a guy on eBay and sold me a pair for like 8 bucks. He includes a small piece of rubber tubing to hold the bulb while you screw it in. Worked perfect on my K250.

If you do not mind waiting out some order time , Newark electronics can supply them for less then .60 cents each.

A company called Bulb works has them in stock for 3.20$ each.
