Hi everyone. I've been radio silent on here for years, as I've been working mostly on 200's, and I've got that figured out. Now, I get a 250, and there's things to be done.

The power lamps within the buttons are so small! Can I get a part number on how to find them?

Lamps are 335's 28volt Careful with the switches / they break way too easy due to age. If you destroy one by accident SteveM has a solution but runs about \$70 a switch. Have a great day.
