Hi, just trying to track down footage of the boost pedal and/or the pedal board for the K250-4 in action. I have a sparkle blue from '71 with 4-12 cab and am trying to find the boost pedal and effects pedal footswitch to complete the dream unit but, as you all know, they are rare birds.

Anyway, I might be able to get modded out replacements for them if I keep coming up empty, but I really would love to see video of the boost pedal or footswitch in action if anyone can upload a video to YouTube or email me directly. Whatever works if there is anyone out there who can help.

Hugs and high fives from New Orleans,

Best, Scott
