I'm fixing a k200b, and somewhere along its life someone added two additional inputs. I have no idea why but they also apparently did not know what solder was because all of the wires are twisted together in a rat's nest. I'm looking for someone with a k200b that can send me a good high quality gutshot pic of an unloaded input. Thank you

Hello and welcomed!
I can send you pictures, but are both the left and right channels messed up ?

They are wired he same so you have a example to go by right there in the amp, and also we have all the schematics you can go by on this web site!

Anyway I can take photos to send your if you PM your email adresss.
