I have recently acquired a Kasino Concert L Head which I have repaired and is up and running...
Was there a specific speaker cabinet that was used with this head ? And what Ohm were they? /
How many speakers ?
Any help is always appreciated!!

The Concert Lead head was paired with a 4x12" speaker cabinet and total load to the head would be 4 ohms. You could run the amp with any speaker combination that equals 4 ohms total for full rated output. It is always safer to run above the 4 ohms, but would not suggest an impedance lower than 4 ohms.

Thanks so much....
So it had its own 4x12 cabinet ?

Yes, it's own , and most importantly wired for 4 ohm load cabinet.

This allowed the amp to produce its most wattage.

The lesser wattage Kustom amps would be matched up to a 8 ohm cabinet.
