I have a kpm160a mixer and the reverb tank is toast. I can't find the Belton model that was in it. What can I use for a replacement? Bsn2ebe1a.

Hello and welcome.
Unfortunately this site does not have info for such a new model as you have there.
I would suggest that you get in contact with the customer service dept at the current Kustom company for assistance.

Yes, welcome.

I searched for Belton tank codes and went to the Belton website and downloaded the pdf for the BS-series tanks.

B=Stands for Belton
S=Stands for small size
N=New version
2=Two springs

The rest of the codes are for input and output impedance, etc. There seems to be a problem with the code that you wrote down, as it doesn't conform to their format. Is there a space (blank) in the code?

In any case, you should be able to figure out enough from the specs listed at the site to match an available tank.

Good luck.
