Hi all!

I stumbled on info about Kustom cabinets on the EL34 world site that has some wrong info in it.

Under the schematic listing they have there for Kustom amps they have a number 13 listing call Speaker configuration.

In that listing is stated that the 3 driver type cabinets are 2.7 ohms, which would call for 8 ohm drivers which is not correct.
All the 3 driver cabinets had 16 ohm drivers which made for a 5.3 ohm load.
