Hi folks!

I've got a lead on one of the monster Kustom K300 PA systems with the head, chrome stand, and twin speaker columns with 2-12" & 3-10" speakers in each. Close to mint condition, with covers. Can I use the head as a bass amp, or is the circuitry in the PA, guitar & bass heads different? The asking price is \$1500. I wouldn't gig with it, it's just gorgeous. I've heard that the "guts" of all their amps were the same, with the guitar & PA heads just adding effects. Is that true, or are the bass heads tuned to different frequencies than the guitar & PA heads?

Yes it can be used for bass, just keep the master volume up 3:00 and that should give you plenty of clean head room.

Also note that since these were made for high impedance mic's that an active bass will clip the input stage pretty easy so you will need to back down on the volume on the guitar to avoid that.

The K300 wants a 4 ohm speaker load to output its full 150 watts of clean power.

It's good you will keep this at home since it's a big size heavy head.
