I recently purchased a K100-1 amp and it needs the power indicator light bulb assembly. I'd appreciate any assistance.

Hi.

The bulb you need is a GE 1829.

If you need the bulb holder and jewel they are both available from antique electronics.

The jewel is part number P-L121.

The bulb holder is P-L124.

Be careful when you get the amp working because that 5 watt box type resistor gets really hot fast!

Thank you! I have the jewel, I just need the lamp and lamp assembly. I appreciate your help.
